TechSol AI Engineer Assignment — Build a BA Meeting Agent

TradeOrigin · Technical assessment · 1-day task

Build an AI agent called **“TechSol BA”** that sits in a meeting, answers questions about cars when called, and saves the notes and tasks to Notion.

What to build

#	The agent must	Must
1	Join a Google Meet, Zoom or Teams call (pick one)	✓
2	Write down what is said, with who said it and when	✓
3	Reply in the meeting chat when someone says “Hey BA”	✓
4	Answer car questions from its own car knowledge base (you build it)	✓
5	Save a summary and the tasks (owner + due date) to Notion	✓

Extension (diagram only, do not build)

In one diagram, show what you built today and how you would extend it:

Extension	Show in diagram
More Notion databases (Decisions, Requirements, Risks)	✓
Car parts / BOM tables and option comparisons	✓
Second meeting platform and voice replies	✓
Memory across past meetings	✓
Data flow: own knowledge base; internet only to fetch data in, meeting data never sent out	✓

Live test

We will test your agent live in a short meeting.

What we give you

Cloud server · LLM API key (OpenAI, Claude or Gemini) · Notion workspace.

What to send us

Code · one diagram (today’s build + extensions) · a short README.
